

Single stream (also known as “fully commingled” or “single-sort”) recycling refers to a system in which all paper fibers, plastics, metals, and other containers are mixed in a collection truck, instead of being sorted by the depositor into separate commodities (newspaper, paperboard, Corrugated fiberboard, plastic, glass, etc.) and handled separately throughout the collection process. In single stream, both the collection and processing systems are designed to handle this fully commingled mixture of recyclables, with materials being separated for reuse at a materials recovery facility.

ALL RECYCLE MUST BE LOOSE IN CANS. NO BAGS IN CANS OR BAGGED RECYCLE WILL BE TAKEN!

ITEMS THEY ARE RECYCLABLE
